

California State University San Marcos
CS/SE 370: Lab 13 – Setting up GitHub

Creating a GitHub repository

1. First of all you can create a repository for your project using the steps in <https://docs.github.com/en/repositories/creating-and-managing-repositories/creating-a-new-repository>
2. Next, you need to clone the repository to your local computer. Follow the steps below.
 - a. On GitHub.com, navigate to the main page of the repository.
 - b. Above the list of files, click **Code**.

- c. Copy the URL for the repository.
 - i. To clone the repository using HTTPS, under "HTTPS", click copy symbol.

- d. Open Terminal.
 - e. Change the current working directory to the location where you want the cloned directory.
 - f. Type “git clone” and then paste the URL you copied earlier.
 - g. Press **Enter** to create your local clone.
3. Add a file from your local computer to git repository.
- a. On your computer, move the file you'd like to upload to GitHub into the local directory that was created when you cloned the repository.
 - b. Open Terminal
 - c. Change the current working directory to your local repository.
 - d. Stage the file for commit to your local repository.
 - i. `git add .`
 - e. Commit the file that you've staged in your local repository.
 - i. `git commit -m "Add existing file"`
 - f. `git push origin YOUR_BRANCH`
4. If you face authentication issue, generate ssh key to add to your github profile and also obtain the token from github and paste it in the password field
